

Making clean energy accessible and usable for everyone – that's the vision of ison. Together, we are scaling a purpose-driven business company to tackle the greatest challenge of our generation - climate change. We create and develop an innovative digital ecosystem with scalable software components that adapts the massively changing needs of customers and an energy market in disruption. We are looking for a

Data Scientist (gn) – Virtual Power Plant Optimization

- You will take ownership and professionalize the optimization model of our Virtual Power Plant in Prosumer business
- You integrate and model Prosumer and Energy Market Use Cases
- You develop algorithms and machine learning models to make predictions, derive recommendations, or automate decision making
- You work with energy experts, data analysts and engineering team

Your skills

- You have successfully completed a scientific or mathematical degree or a comparable course of study
- You have experience in data science in a professional context
- You have experience in energy data modelling, ideally in (virtual) power plant optimization
- You have programming skills in Python including relevant machine learning frameworks
- You are able to explain and visualize complex issues in an easily understandable way and enjoy communicating with colleagues from your own and other teams
- Ideally, you already have experience with AI driven data science application like Spark, R or Snowflake
- Written and spoken English is no problem for you

We offer you

- Speed, agility, and space to grow - personal and career-wise
- Our vision to accelerate the transition to clean energy for everyone
- The opportunity to play a key role in a lean, customer-driven business and tech development
- A hybrid work model

Do you want to join our mission and get to know the ison team? Then let's get in touch - we look forward to hearing from you!
